
The big picture

Object-Oriented Programming

Statements

- Variable declaration

```
type variable1, variable2, ... , variablen;
```

```
int x;  
boolean sunny, rainy, cloudy;  
String s;  
Student p;
```

- Assignment

```
variable = expression;
```

```
x = 2;  
x = x * 3;  
sunny = !rainy && !cloudy;  
s = "hello";  
p = new Student();
```

Statements (contd.)

- Conditional

```
if (boolean_expression) {  
    statements;  
}
```

or

```
if (boolean_expression) {  
    statements1;  
}  
else {  
    statements2;  
}
```

Statements (contd.)

- Loops

```
while (boolean_expression) {  
    statements;  
}
```

or

```
do {  
    statements;  
} while (boolean_expression);
```

or

```
for (init; boolean_expression; step) {  
    statements;  
}
```

Statements (contd.)

- Method calls

```
variable.method_name(arg1, arg2, ..., argn);  
  
int n = s.length();  
char c = s.charAt(3);  
p.compute_gpa();
```

- Static method calls

```
class_name.method_name(arg1, arg2, ..., argn);  
  
int n = Keyboard.readInt();  
double d = Math.pow(n, 3);  
Student.m();
```

Classes

- Class definition

```
public class Class_name {  
    Attribute_declarations;  
  
    Method_declarations;  
}
```

- Attribute declaration:

```
[modifier] [static] type variable_name;
```

```
String title;  
private int age;  
public static Person director;
```

Classes (contd.)

- Method declaration:

```
[modifier] [static] type method_name (type1 p1,  
                                           type2 p2,  
                                           ...,  
                                           typen pn)  
  
{  
    statements ;  
}
```

Examples

```
public class Movie {
    private String title;
    private String director;
    private static int counter = 0;
    public Movie(String t, String d)
    {
        title = t;
        director = d;
        counter++;
    }
    public void change_title(String t)
    {
        title = t;
    }
    public String get_director() {
        return director;
    }
    public static int how_many()
    {
        return counter;
    }
}
```

Examples (contd.)

```
public class MovieApp {
    public static void main(String[] args)
    {
        String title = "Pirates of the Caribbean";
        String dir = "Jerry Bruckheimer";
        Movie m;
        m = new Movie(title, dir);
        m.change_title("The curse of the
                       black pearl");
        int n = Movie.how_many();
    }
}
```

Examples (contd.)

```
public class Person
{
    public String name;
    private int age;
    public Person(String name, int age)
    {
        this.name = name;
        this.age = age;
    }
    public void grow_up()
    {
        age++;
    }
}
```

Examples (contd.)

```
public class Movie {
    private String title;
    private Person director;
    private static int counter = 0;
    public Movie(String t, Person d)
    {
        title = t;
        director = d;
        counter++;
    }
    public void change_title(String t)
    {
        title = t;
    }
    public Person get_director() {
        return director;
    }
    public static int how_many()
    {
        return counter;
    }
}
```

Examples (contd.)

```
public class MovieApp {
    public static void main(String[] args)
    {
        String title = "Pirates of the Caribbean";
        String dir = "Jerry Bruckheimer";
        Movie m;

        Person p = new Person(dir, 157);

        m = new Movie(title, p);

        m.change_title("The curse of the
                        black pearl");
        int n = Movie.how_many();

        Person q = m.get_director();
        q.grow_up();
        System.out.println(q.name);
    }
}
```

Examples (contd.)

```
public class Movie {
    private String title;
    private static Person director;
    private static int counter = 0;
    public Movie(String t, Person d)
    {
        title = t;
        director = d;
        counter++;
    }
    public void change_title(String t)
    {
        title = t;
    }
    public Person get_director() {
        return director;
    }
    public static int how_many()
    {
        return counter;
    }
}
```

Examples (contd.)

```
public class MovieApp {
    public static void main(String[] args)
    {
        String title1 = "Pirates of the Caribbean";
        String dir = "Jerry Bruckheimer";
        Person p = new Person(dir, 157);
        Movie m1 = new Movie(title, p);

        String title2 = "Indiana Jones";
        Person q = new Person("Steven Spielberg", 201);
        Movie m2 = new Movie(title2, q);

        Person r = m1.get_director();
        System.out.println(r.name);
    }
}
```
